Sewage Treatment Design Flow Chart

Water Quality Program

1. **Site & Soils Evaluation:** The property owner or proposed site developer must contact a soil scientist to complete the soils evaluation form. A list of qualified soil scientist can be found at www.ohiopedologist.com.

(When complete go to the next step)

2. **STS Layout or Design Plan:** When the site and soil evaluation is complete it can be given to a Registered Installer to provide you with a Sewage Treatment System Layout Plan or a designer (surveyor or engineer) can complete a Sewage Treatment System Design Plan.

(When complete go to the next step)

3. **Site Review Application:** When the above two steps are complete the information must be submitted to Franklin County Public Health. A Site Review Application must also be completed with the information submittal (along with fee).

(When completed go to the next step)

4. **Permit Application:** If all of the information required for the Site Review appears to be consistent and Franklin County Public Health's Sewage Treatment System rules then a permit to construct or install the proposed Sewage Treatment System can be purchased.
